

## **UNMATCHED SOLUTION FOR SECURING CONFIDENTIAL DATA EVEN WHILE**

### **WORKING FROM HOME OR WORKING REMOTELY**

#### **With integration over a Secure VPN Channel for Highly Secure Communication**

All major companies deal with confidential intellectual property that they want to protect, no matter what. But what if these files are transferred or accessed from a public internet by work from home employees. How can you ensure the integrity of this property?

**AnexGATE Patrol** is an innovative solution that ensures these files cannot be copied or transferred from your local drive over a USB or any local storage. It even ensures that your employees cannot upload these files into the cloud or any other third party upload and transfer service.

One of the major highlights of this system is that it provides tracking and monitoring of all activity of file transfer and upload of this intellectual property that happens over the laptops or systems of your work from home employees.

### USB Blocking and Monitoring

If USB devices are blocked, all transfer is stopped but you can monitor the activity. In case USB is not blocked, you can track and monitor all the transfer activity to the USB Drive

### Block Print of Documents

This feature block the printing of all intellectual property documents so that people cannot print any of these documents on local printers at

### Block File attachments and uploads

This prevents employees from attaching files to personal mails and/or any uploads to file transfer apps to share these files.

### Block Drag and Drop

This prevents all drag and drop of all files for any application or purpose of sharing or uploading files.
