Testing Methodologies :-

· Maximum throughput performance is measured under ideal test conditions with applications disabled using industry standard performance test tools.

- Firewall throughput performance is based on RFC 2544 guidelines. All Performance values are "up to rough guideline only" and vary depending on system configuration.
- IPS throughput(http) using default IPS rule set and 512KB object size
- VPN throughput using multiple tunnels with 512KB response size
- · Testing done with multiple flows through multiple port pairs
